

EMBEDDED ENGINEER

BfxSolutions, started 2013 as an innovation company focused on IoT and purpose built mobile applications.

Today we have in-house production of HW/SW design to final frontend/backend solutions with native Android & iOS mobile support.

We are now looking to expanding our team.

To fit in, new team members need to be team & result oriented, creative and most of all flexible with the willing to learn new things. All of our solutions we create demand problem solving and creative thinking as they are cutting edge in their own field.

If you are an embedded engineer with knowledge of:

- C/C++
- Hardware - Arduino, Raspberry Pi genre, Mbed
- General understanding of electronics

Please apply to career@bfxsolutions.com

'Straight and simple and applies for all applicants, you will be asked to demonstrate your skills with practical test related to your stated expertise.
